pp per doubling of team size (95% CI)
By area
Neuroscience, brain decoding and spiking networks
Diffusion image, video and motion generation
VLM reasoning, knowledge graphs and interpretability
Vision-language models and few-shot learning
LLMs and natural language processing
Representation geometry, clustering and kernel methods
LLM efficiency, sequence models and audio
Embodied AI, driving and video understanding
Computer vision, 3D vision and imaging
Adversarial robustness, backdoors and AI security
LLM reasoning, agents, code and alignment
GANs, VAEs, diffusion and flow models
Generalization theory, compression and architecture design
Graph neural networks
Robust, continual, transfer and label-efficient learning
Reinforcement learning
Causal inference and biomedical ML
Optimization, scientific ML and probabilistic inference
Time series and spatiotemporal modeling
Federated learning, privacy and decision making
