pp per doubling of team size (95% CI)
By area
Neuroscience, brain decoding and spiking networks
LLMs and natural language processing
Diffusion image, video and motion generation
Vision-language models and few-shot learning
VLM reasoning, knowledge graphs and interpretability
Embodied AI, driving and video understanding
Computer vision, 3D vision and imaging
Representation geometry, clustering and kernel methods
LLM efficiency, sequence models and audio
LLM reasoning, agents, code and alignment
Adversarial robustness, backdoors and AI security
Generalization theory, compression and architecture design
Robust, continual, transfer and label-efficient learning
Reinforcement learning
GANs, VAEs, diffusion and flow models
Graph neural networks
Causal inference and biomedical ML
Optimization, scientific ML and probabilistic inference
Time series and spatiotemporal modeling
Federated learning, privacy and decision making
